## Staff Software Engineer — Design Systems & Frontend Architecture

Monument, CO · [pantier.nick@gmail.com](mailto:pantier.nick@gmail.com) · [npantier.github.io](https://npantier.github.io) · [linkedin.com/in/nickpantier](https://linkedin.com/in/nickpantier) · [github.com/npantier](https://github.com/npantier)

### SUMMARY

---

Staff Software Engineer specializing in design systems and frontend architecture, rooted in graphic and interactive-media design. A decade in frontend — lately architecting component libraries from the ground up, leading org-wide migrations, and building the AI-assisted tooling that multiple engineering teams depend on daily, for a high-traffic consumer healthcare platform. A designer's eye for craft with an engineer's leverage: I review nearly as much code as I write.

### SKILLS

---

**Languages & Frameworks:** TypeScript, JavaScript, React, Next.js, Node.js, HTML5, CSS3/SCSS, Java

**Design Systems:** Design tokens, component API design, theming, Storybook, accessibility (WCAG 2.2 AA, ARIA Authoring Practices, semantic HTML, keyboard & focus management), responsive/mobile-first systems

**Tooling & Platform:** AI-assisted developer tooling (Claude Code skills/plugins), automated accessibility testing (axe, Playwright, Storybook a11y), codemods, monorepos, pnpm, Webpack, micro-frontends, CI

**Practices:** Frontend architecture, large-scale migrations, performance optimization (Core Web Vitals), code review & technical standards, dependency-security remediation

### EXPERIENCE

---

#### Healthgrades

Denver, CO · July 2014 – Present

*Acquired by Red Ventures (2021); now operated under RVO Health, a Red Ventures + Optum joint venture*

**Staff Software Engineer** (2025–Present) · Senior (2018–2025) · Associate (2014–2018)

- Architected a greenfield design-system component library end-to-end — design-token packages, accessible primitives (Combobox, Meter, Field, Button) built to the ARIA Authoring Practices (keyboard + focus management), runtime config validation, and a mobile-first responsive model — now consumed by 4 teams across a dozen-plus applications.
- Founded the company's AI & Engineering Chapter — grown from the Front End Chapter I lead — cross-team forums for technical knowledge-sharing and advancing AI adoption across the org.
- Led the org-wide migration off a legacy design system across 12+ repositories, eliminating duplicated UI code and unblocking a platform-wide framework upgrade.
- Built AI-assisted migration tooling (Claude Code skills, a plugin library, and codemods) that cut per-repo migration from ~2 days to ~1 hour — a self-serve workflow the whole frontend org runs.
- Delivered accessibility at the source: audited color tokens for WCAG 2.2 AA contrast (fixing every downstream app at once) and wired automated a11y checks (axe, Storybook a11y) into the pipeline to catch regressions.
- Designed a typed localization layer that treats user-facing text like theming for the React render tree — a single typed contract defines every string slot, locale dictionaries satisfy it, and clients override per-locale at mount time.
- Modernized the build pipeline (LESS→SCSS, Storybook 8→10, pnpm) and drove frontend performance — render and critical-CSS optimization, Core Web Vitals — on the highest-traffic, SEO-critical pages.
- Owned the search-autosuggest experience end-to-end — a low-latency type-ahead built to the ARIA combobox pattern (keyboard, focus, live-region announcements) — plus syndicated-search and provider-discovery surfaces.
- Primary code reviewer for the frontend org — 1,166 teammate PRs reviewed, a near 1:1 ratio with my own authored work — and shipped 1,095 merged PRs at a 90% merge rate across 48 repositories spanning TypeScript/React frontends and Java services.

### EDUCATION

---

**The Art Institute of Colorado** — AAS, Interactive Media Design

2007 – 2009

**University of Wyoming** — BA, Art / Graphic Design

2001 – 2006
